edgartj@plu.edu

The *multiset* of perfect powers is the collection $\mathbf{P} = \{n^m \mid n > 1; m > 1\}$:

$$\mathbf{P} = \{2^2, 2^3, 2^4, \dots, 3^2, 3^3, 3^4, \dots, 4^2, 4^3, 4^4, \dots, 5^2, 5^3, 5^4, \dots\}.$$

Theorem. *The sum of reciprocals of perfect powers is 1:* $\sum_{b \in \mathbf{P}} \frac{1}{b} = \sum_{n \geq 2} \sum_{m \geq 2} \frac{1}{n^m} = 1.$

Summary. We wordlessly show that the sum of reciprocals of perfect powers (with duplicates included) is 1.
